

Air Partner draws positive balance

09 | 07 | 08 - Following the opening of a German freight department in Cologne, the company wants to further expand its activities.

Due to the rising global demand for their freight charter services, Air Partner plans to add further offices in the USA, India and China to the already existing freight offices in London, Paris, Dubai, Tokyo and Cologne. The first of the upcoming offices openings is the new Air Partner U.S.A. Freight office in Kansas City, which will begin business on the 1st September 2008.

On behalf of the freight forwarding sector, Air Partner arrange suitable charter solutions for anything from urgent 2kg small parcels up to large oversized pieces of over 20,000kgs.

Each freight department benefits from the network of Air Partner offices in being able to combine charter enquires with existing so called “empty leg” opportunities from within the group.

The team at Air Partner Germany, work alongside their colleagues in the Passenger department who arrange helicopter, private jets and commercial aircraft for charter.

Air Partner Germany’s core business is express deliveries (for the automotive industry), high value transport, concert equipment, outsized cargo and humanitarian aid, on behalf of numerous governmental and non-governmental organisations.

The cargo division is operational 24hours and is supported by an in-house Operations department who arrange global flight support services such as Flight permissions, refuelling and handling for in-house and to external clients.
